

The background features a stylized, tilted laptop keyboard on the left side. From the keyboard, several bright, glowing blue lines extend upwards and outwards, creating a sense of motion and technology. The bottom of the image is filled with a colorful, pixelated pattern in shades of blue, yellow, and red, resembling a digital or circuit board design. The overall color scheme is dominated by various shades of blue.

# Topics

---

- ❖ **Statistics [1]**
- ❖ **Most Interesting New Product [2]**
- ❖ **Related Product and Demonstration [3]**
- ❖ **Embedded Touch [12]**
- ❖ **Touch-Module Makers [7]**
- ❖ **Touch-Display Makers [2]**
- ❖ **Something Unusual [2]**
- ❖ **Summary of Observations [1]**

## ❖ 35% of booths were touch-related (63 of 182)

Product	Exhibitors	Product	Exhibitors
Modules	15	Bonding	2
Enhancements	8	Glass processing	2
Adhesives	6	Market research	2
Metal & CNT films	5	EMR digitizer	1
Touch displays	5	Haptics	1
Controllers	3	Laser patterning	1
Embedded touch	3	Multi-touch self-capacitive	1
Glass	3	Pressure-sensing tiles	1
Integration	3	Passive styli	1

- ◆ 14 of 15 touch-module suppliers were showing p-cap; Fujitsu (resistive-only) was the sole exception
- ◆ 8 of 15 also showed resistive
- ◆ Only one even mentioned SAW or surface-capacitive (etc.)

# Most Interesting New Product...1

## ❖ Cima NanoTech

- ◆ “Self-assembling” silver mesh
- ◆ Starts with an opaque liquid coated on film with standard equipment
- ◆ 30 seconds later it dries into a random-pattern silver mesh
- ◆ Should be competitive with current metal-mesh films

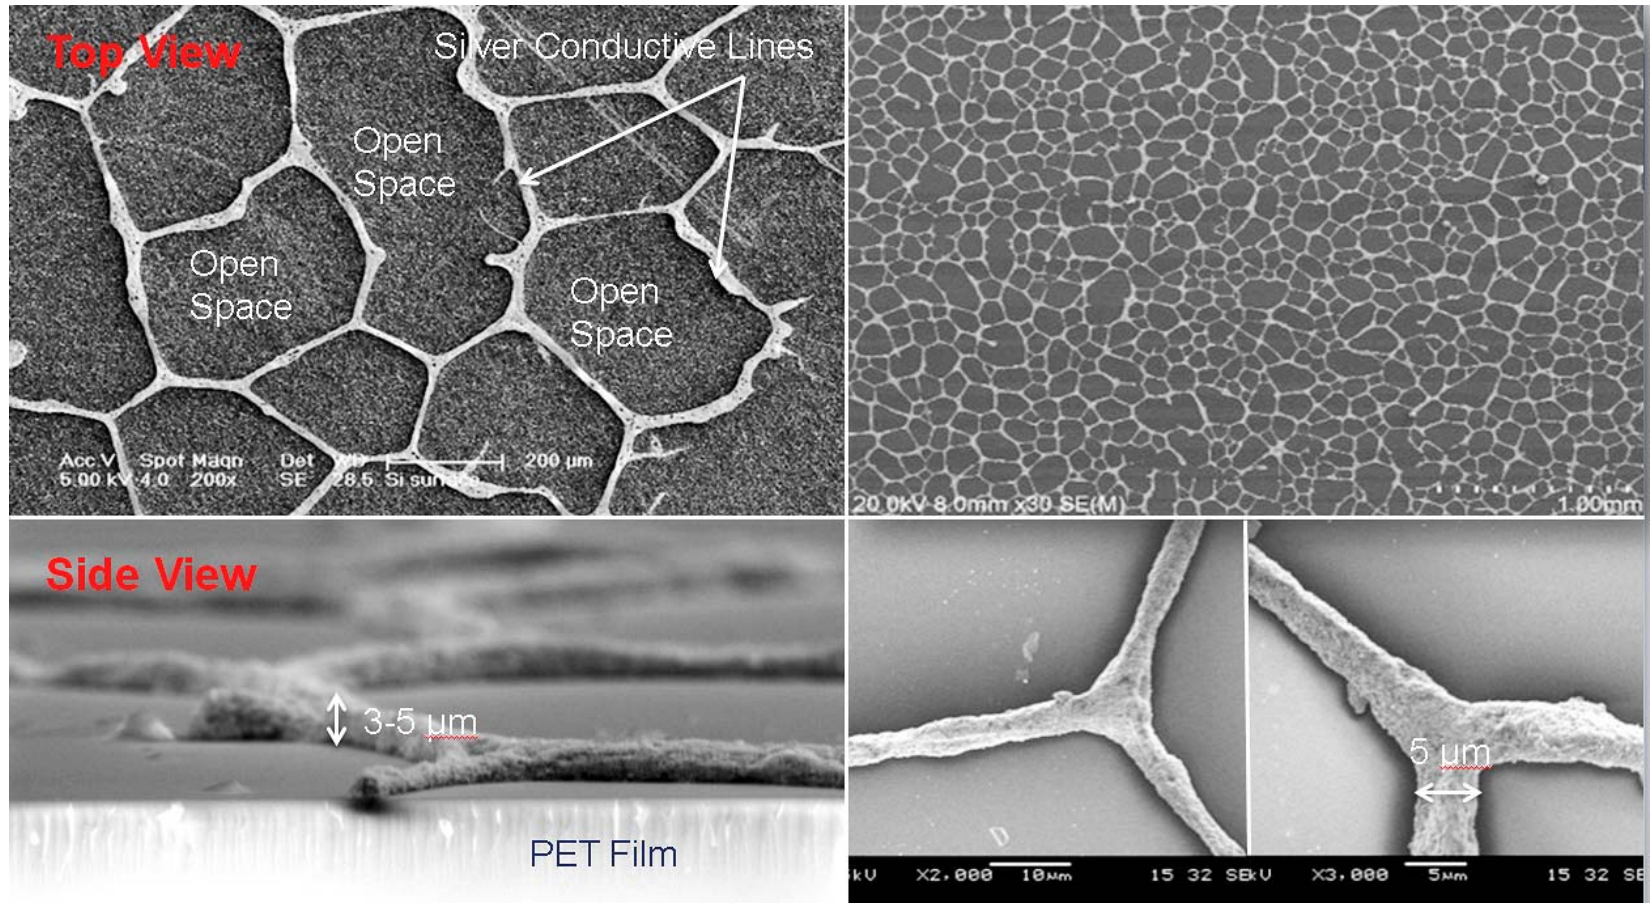

Drying sequence (photos by Cima NanoTech)

# Most Interesting New Product...2

## ❖ Cima NanoTech continued...

(Photos by Cima NanoTech)

# Related Product: CNTs

## ❖ Carbon NanoBuds™ by Canatu (Finland)

- ◆ “NanoBud” = nanotubes + buckyballs (fullereens)
- ◆ Probably the best current bet on CNTs, with high-volume production in 2014
  - Better optical performance than silver nanowires
    - Very low reflectivity and lower haze
  - Dry patterning, which allows printing electrodes and connections simultaneously (like metal mesh)
  - More flexible (bend radius 0.5 mm!)

(Artwork by Canatu)

# Related Demonstration...1

## ❖ Samsung Display showed a 23-inch “metal wired touch” monitor with a plastic cover-glass

- ◆ PMMA + OCA + film sensor
- ◆ Could be copper metal-mesh or silver nanowires
- ◆ Plastic cover-glass was very nice (anti-glare, good feeling, 5H hardness)
- ◆ Touch performance (rated at 10 touches) was very poor
  - I don't get it... why show something with such bad performance??
  - Better performance has been shown by others

# Embedded Touch: JDI...1

- ❖ Japan Display Inc. (JDI) was pushing “Pixel Eyes” (their hybrid in-cell/on-cell touch) very heavily

The IPS anti-static ITO layer is segmented into receive electrodes

Groups of Vcom electrodes are combined to form transmit electrodes

Drawing by JDI

# Embedded Touch: JDI...2

## ❖ Another view of Pixel Eyes hybrid in-cell/on-cell

Drawing by JDI

# Embedded Touch: JDI...3

## ❖ JDI showed a 7-inch pen-only Pixel Eyes demo

- ◆ The passive pen worked quite well but finger-touch sometimes also worked although it wasn't supposed to

Proto type

In Plane Switching WhiteMagic. Pixel Eyes.

**Innovation Vehicle for Tablet**

7.0-inch WQXGA

2560(W) × 1600(H) pixel **431ppi**

◆ LTPS	◆ In-cell TP (pen input demo)
◆ Contrast ratio : 2000:1	◆ Ultra thin : 1.28mm (w/o CG)
◆ B/L power consumption : reduced approximately 50%	◆ 1.78mm (w/ CG)

# Embedded Touch: JDI...4

- ❖ JDI also pushed OGS, not just embedded touch

Ultra-Light Media Tablet (ULMT) Series

# Embedded Touch: JDI...5

## ❖ JDI's "Sensor on Cover Lens" = OGS

Drawing by JDI; annotation by Author

# Embedded Touch: LG Display...1

## ❖ LG Display showed a 7-inch hybrid in-cell

- ◆ This is a different hybrid structure than JDI's
- ◆ Touch performance was terrible; booth staff claimed that the problem was too much EMI at the show (I don't believe it)

Drawing by LG Display

# Embedded Touch: LG Display...2

- ◆ From this chart you can calculate that 40 V<sub>com</sub> electrodes (1280 / 32) are grouped to form each of 32 transmit electrodes

**7" WX Hybrid In - cell (Oxide TFT)**

Size	7.0 inch
Resolution	800 x RGB x 1280
Display Mode	AH5-IPS
Backplane	Oxide TFT
Touch Type	Mutual Cap. (F1T)
# of Touch Channel	32(Tx) X 20(Rx)
Report Rate	120Hz
Input	Finger, Pen $\Phi$ 2.5

Note that they're making up their own abbreviations as they go!

Note also the pen-tip diameter spec!

Table by LG Display

# Embedded Touch: Innolux...1

---

## ❖ Innolux was emphasizing on-cell in order to keep their LCD yields high

- ◆ Complete cell is built, including glass-thinning, then on-cell touchscreen is added
- ◆ ITO quality is lower using this method (can't anneal at high temperature) but Innolux would rather have high LCD yields
  - They say they're still working on in-cell (not exhibited this year)
  - They confirmed that "Touch On Display" (TOD) is a brand that covers ALL of their in-cell, hybrid, and on-cell technologies (this is relevant to the Apple iPhone-6)
  - BUT, they're not using the brand in their booth this year because they're using it "only with customers"!

# Embedded Touch: Innolux...2

- ❖ Innolux showed many complete touch displays, including a 4.5-inch 3D touch model

<b>4.5" 3D Touch Display</b>	
<b>Technology</b>	LTPS AAS + 2D/3D Switchable Barrier + On-cell Touch
<b>Resolution</b>	1280 x 720 x RGB (2D) 640 x 720 x RGB (3D)
<b>PPI</b>	330 (2D)
<b>Module Outline (mm)</b>	109.5 x 60.2 x 2.0
<b>Luminance (nits)</b>	450 (2D) 225 (3D)
<b>View Angle (U/ D/ R/ L, CR&gt;100)</b>	80/ 80/ 80/ 65 (2D)
<b>Contrast Ratio</b>	1100 : 1
<b>Color Depth</b>	16.7M
<b>Color Gamut</b>	sRGB
<b>Electrical Interface</b>	MIPI

# Touch-Module Makers: 3M Touch

- ❖ 3M was showing off their prowess at large-format wire-based p-cap (55" prototype)

There's a laptop strapped underneath a standard NEC display – it's a true prototype!

Photo by Author

# Touch-Module Makers: Fujitsu

## ❖ Fujitsu isn't slacking off their resistive business

### Resistive Touch Panels Multi-Touch

**Features**

- 4-, 5-, 7-wire and Multi-Touch types
- 10-finger Multi-Touch
- 2-finger Dual-Touch 4-wire
- Windows®, Linux™ & Android™ Drivers
- USB, Serial, I<sup>2</sup>C, & SPI Interfaces
- Touch Solutions for Industrial Use
- Gorilla® Glass and Plastic Panels
- Advanced Performance Features

**FUJITSU** shaping tomorrow with you

### Feather Touch 4-wire Resistive Dual-Touch Panels

**Features**

- Pinch, Expand, Rotate, Flick, & Swipe Gestures
- Low Activation Force
- Optimized Touch Feeling
- Anti-Glare or Clear Finish
- Flush Surface Design available
- Film-Film-Plastic
- Film-Glass
- USB, Serial, I<sup>2</sup>C Controllers
- Windows® or Android™ Drivers

**FUJITSU** shaping tomorrow with you

Posters by Fujitsu

# Touch-Module Makers: AM Touch USA

- ❖ **AM Touch USA (part of AMT-Taiwan) showed a 21.5-inch p-cap with surprisingly good performance**

They do their own controller so they can provide better support to their commercial customers

Photo by Author

# Touch-Module Makers: Panjit

- ❖ New management at Panjit (Mildex Optical) finally allows taking photos of their products!

Photo by Author

# Touch-Module Makers: Touch International...1

---

- ❖ Touch International's new marketing campaign

What is the “WoW” Factor?

**W EIRD O R W ACKY!**

What does that mean?

**CRAZY  
COVER  
GLASS!**

**DAZZLING  
BRIGHT  
DISPLAYS!**

**CONCAVE  
AND  
CONVEX!**

**WATER  
IMMUNITY!**

# Touch-Module Makers: Touch International...2

## ❖ Touch International's new marketing campaign

### Ingredients & Additives

# Touch-Module Makers: UICO vs. Ocular

- ❖ UICO develops their own touch controller in order to optimize for water & gloves (etc.)
- ❖ Ocular partners very closely with Atmel and tries to convince them to optimize for water & gloves (etc.)
- ❖ **Which strategy is better?**

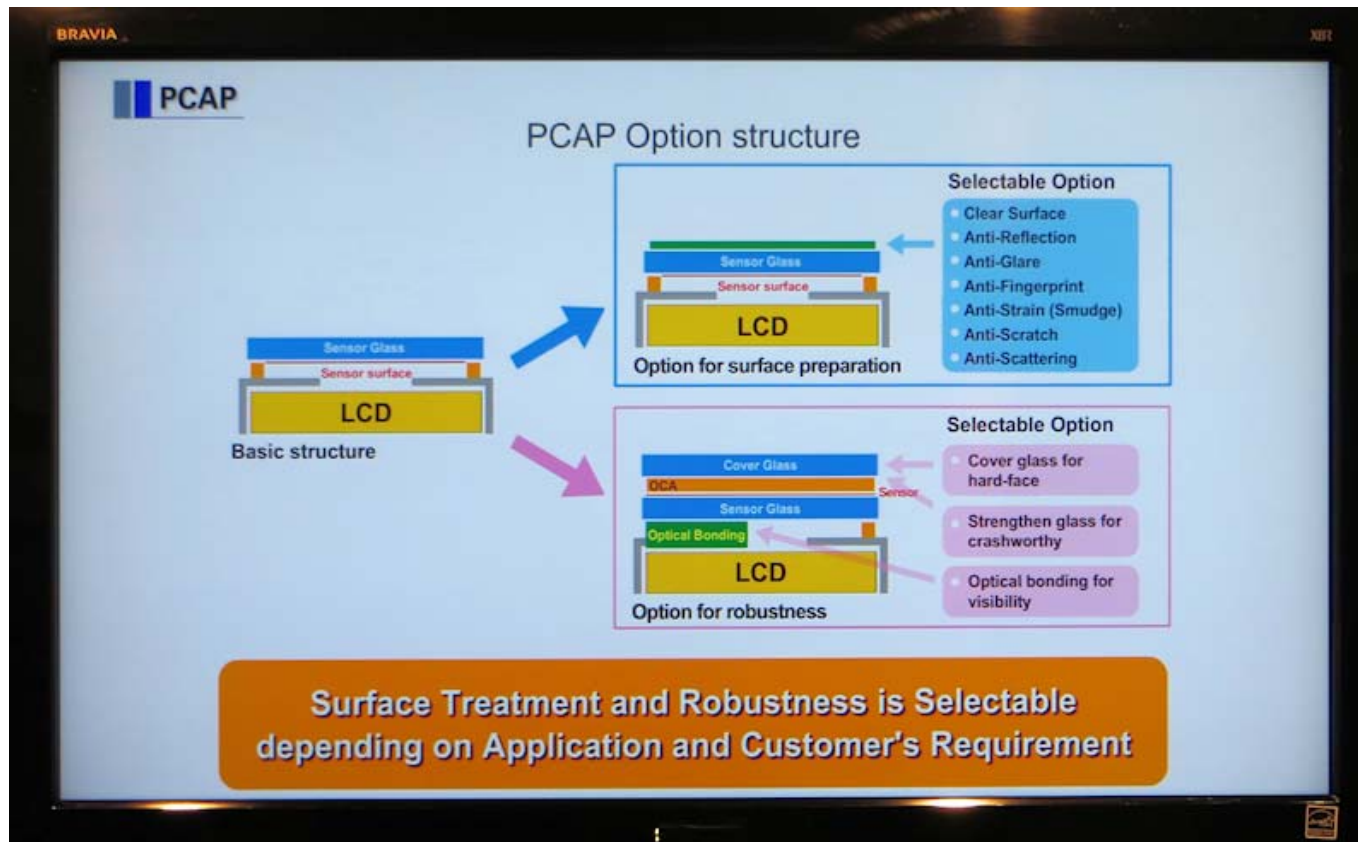

Handheld  
shower  
spray

WaterSENSE® from UICO

# Touch-Display Makers: Renesas/NLT

## ❖ Renesas/NLT (formerly NEC) finally stopped showing surface-capacitive

This slide shows a good example of p-cap options for commercial applications

Photo by Author; Slide by Renesas/NLT

# Touch-Display Makers: Bi-Source

- ❖ BSI showed the only IR touchscreen at the show!

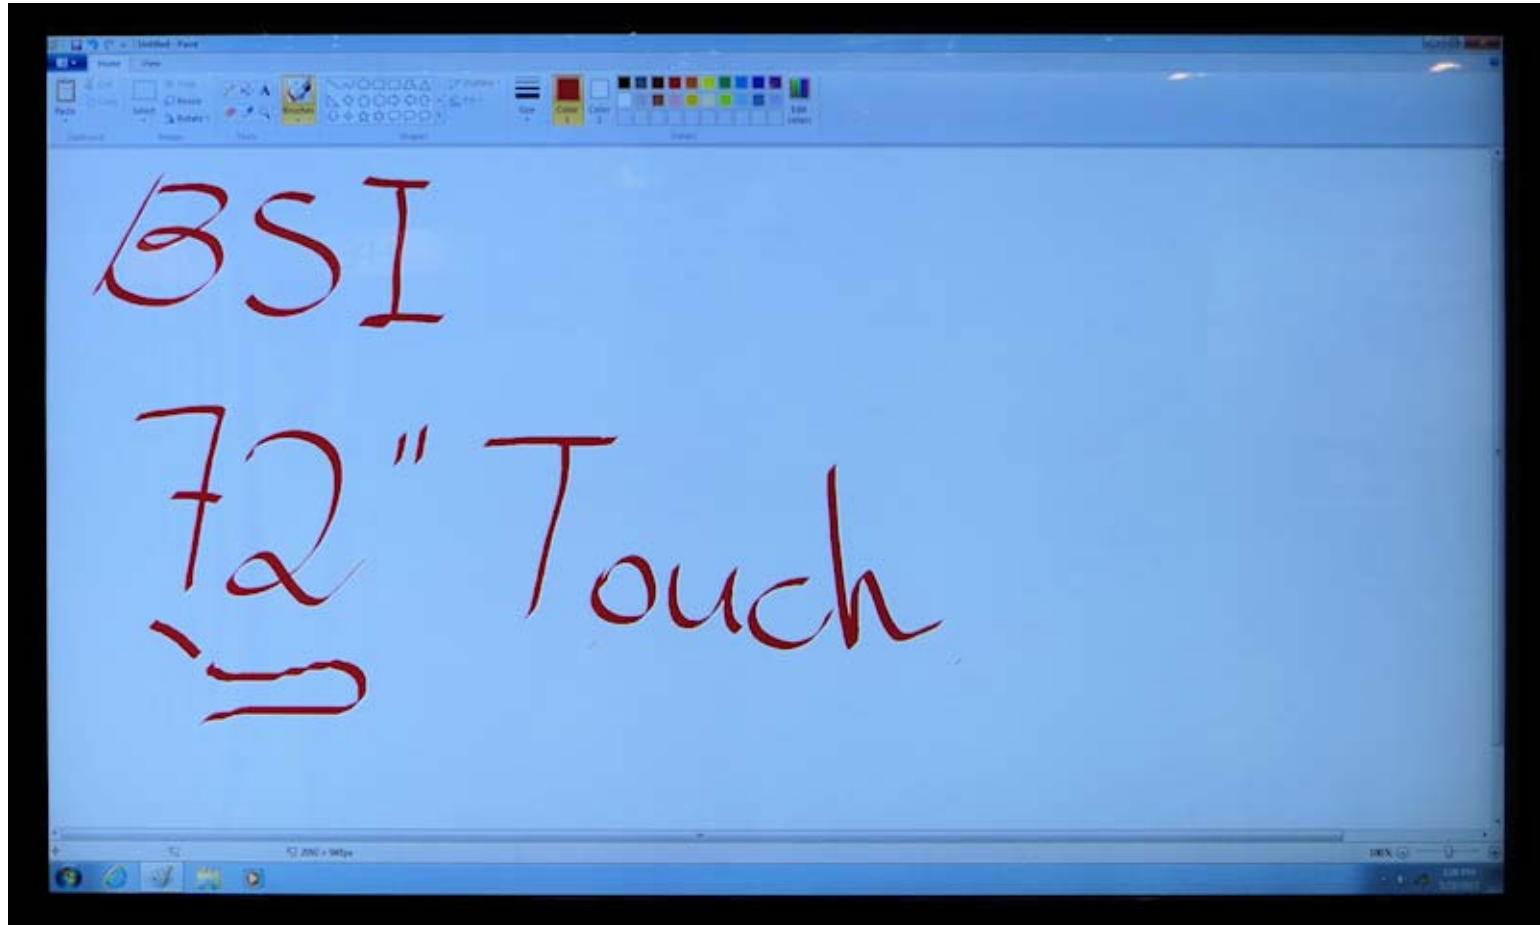

Photo by Author

# Fogale: Something Unusual...1

---

## ❖ Fogale (from France) has developed multi-touch/ multi-touchless self-capacitive

- ◆ Derived from their “anti-collision system” for medical machines (contactless body detection for X-rays) developed with GE
- ◆ Technology specs
  - Multi-touch: 5 touches on 5” screen, 10 touches on 10”
  - Multi-touchless: 5 cm for fingertip, 10 cm for whole hand
  - Accuracy and linearity: better than 1 mm
  - Works through dielectrics (glove, glass, plastic, wood, etc.)
- ◆ Technology uses “active shield” to totally eliminate all parasitic capacitance, allowing measurement of 0.001 pF between electrode and target (100X better than current)
  - 0.001 pF corresponds to a hand 100 mm from a 1-cm<sup>2</sup> electrode

# Fogale: Something Unusual...2

- ❖ It's possible to integrate the technology into a smartphone, but the applicability is TBD

Sensor:  
Concept active guard  
Electrodes design & drawing  
Concept & drawing of flex

IC:  
Concept / Design (AFE)  
Architecture  
Signal processing (FW)

Applications:  
Gesture & optical & vocal  
Combined technologies  
3D commands

(30 patents)

Artwork by Fogale

# Summary of Observations

---

- ❖ Not as many truly new developments as in 2012
- ❖ # of material-makers > # of module-makers exhibiting
- ❖ P-cap has knocked out everything except resistive
- ❖ Embedded touch (hybrid, on-cell, in-cell) is growing
- ❖ ITO replacements (especially metal-mesh) are growing
- ❖ Enhancements are very important in commercial apps
- ❖ Exhibitors appeal more to commercial than consumer
- ❖ Even though p-cap is dominant, innovation continues

All products, computer systems, dates, and figures specified are preliminary based on current expectations, and are subject to change without notice.

Performance tests and ratings are measured using specific computer systems and/or components and reflect the approximate performance of Intel® products as measured by those tests. Any difference in system hardware or software design or configuration may affect actual performance. Buyers should consult other sources of information to evaluate the performance of systems or components they are considering purchasing. For more information on performance tests and on the performance of Intel® products, visit [Intel Performance Benchmark Limitations](#)

Results have been estimated based on internal Intel® analysis and are provided for informational purposes only. Any difference in system hardware or software design or configuration may affect actual performance.

Results have been simulated and are provided for informational purposes only. Results were derived using simulations run on an architecture simulator or model. Any difference in system hardware or software design or configuration may affect actual performance

Intel® does not control or audit the design or implementation of third party benchmarks or Web sites referenced in this document. Intel® encourages all of its customers to visit the referenced Web sites or others where similar performance benchmarks are reported and confirm whether the referenced benchmarks are accurate and reflect performance of systems available for purchase.

Intel® processor numbers are not a measure of performance. Processor numbers differentiate features within each processor family, not across different processor families. See [www.intel.com/products/processor\\_number](http://www.intel.com/products/processor_number) for details.

Intel®, processors, chipsets, and desktop boards may contain design defects or errors known as errata, which may cause the product to deviate from published specifications. Current characterized errata are available on request.

Hyper-Threading Technology requires a computer system with a processor supporting HT Technology and an HT Technology-enabled chipset, BIOS and operating system. Performance will vary depending on the specific hardware and software you use. For more information including details on which processors support HT Technology, see <http://www.intel.com/info/hyperthreading>

Intel® Virtualization Technology requires a computer system with a processor, chipset, BIOS, virtual machine monitor (VMM) and applications enabled for virtualization technology. Functionality, performance or other virtualization technology benefits will vary depending on hardware and software configurations. Virtualization technology-enabled BIOS and VMM applications are currently in development.

Intel® Turbo Boost Technology requires a PC with a processor with Intel® Turbo Boost Technology capability. Intel® Turbo Boost Technology performance varies depending on hardware, software and overall system configuration. Check with your PC manufacturer on whether your system delivers Intel® Turbo Boost Technology. For more information, see <http://www.intel.com/technology/turboboost>.

64-bit computing on Intel® architecture requires a computer system with a processor, chipset, BIOS, operating system, device drivers and applications enabled for Intel® 64 architecture. Performance will vary depending on your hardware and software configurations. Consult with your system vendor for more information.

Lead-free: 45nm product is manufactured on a lead-free process. Lead is below 1000 PPM per EU RoHS directive (2002/95/EC, Annex A). Some EU RoHS exemptions for lead may apply to other components used in the product package.

Halogen-free: Applies only to halogenated flame retardants and PVC in components. Halogens are below 900 PPM bromine and 900 PPM chlorine.
