

Project Alloy
with Intel® RealSense Technology:
Merging the REAL & the VIRTUAL Worlds

Achin Bhowmik, PhD
Vice President & General Manager
Perceptual Computing Group
Intel Corporation

Definitions...

- Virtual Reality
 - Places the user in a virtual environment, generating sensory stimuli (visual, vestibular, auditory, haptic, ...) that provide the sensation of “presence” and “immersion”
- Augmented Reality
 - Places virtual objects in the real-world, in some cases also providing sensory cues to the user that are consistent between the physical scene and the augmented elements
- Merged Reality
 - Blends real-world environment and elements within the virtual environment with consistent perceptual cues, in some cases with scene understanding and natural interactions

(In)famous “User Experience” Issues

- Visual experiences
 - “Screen-door” effects due to “low” display resolutions
 - Field-of-view (FOV) limitations
 - Motion artifacts due to “low” display frame-rates
- System/ergonomic issues
 - Tethered headsets (lighter) vs. all-in-one systems (heavier)
 - Computing power vs. application richness
 - Tracking setup vs. integrated “inside-out” tracking, 3-DOF vs. 6-DOF
- Inconsistent cues from the visual and vestibular sensory systems
 - Motion that is “felt” but not “seen”
 - Motion that is “seen but not “felt”
 - Both systems detect motion but they do not correspond
- Inconsistent oculomotor cues
 - Eye accommodation/convergence mismatch
 - Incorrect focus/blur cues
- Missing or inconsistent proprioception cues
- ...

Project Alloy: A Merged Reality Device

Project Alloy: A Merged Reality Device

Untethered, all-in-one design

- Multi-room scale mobility, no setup

Intel® RealSense™ Technology

- Integrated 6DOF tracking
- Hand tracking & interaction
- Merged reality experiences

High-performance computing

- PC-class processor, graphics and accelerators

Real-Time 3D-Sensing with Intel RealSense Technology

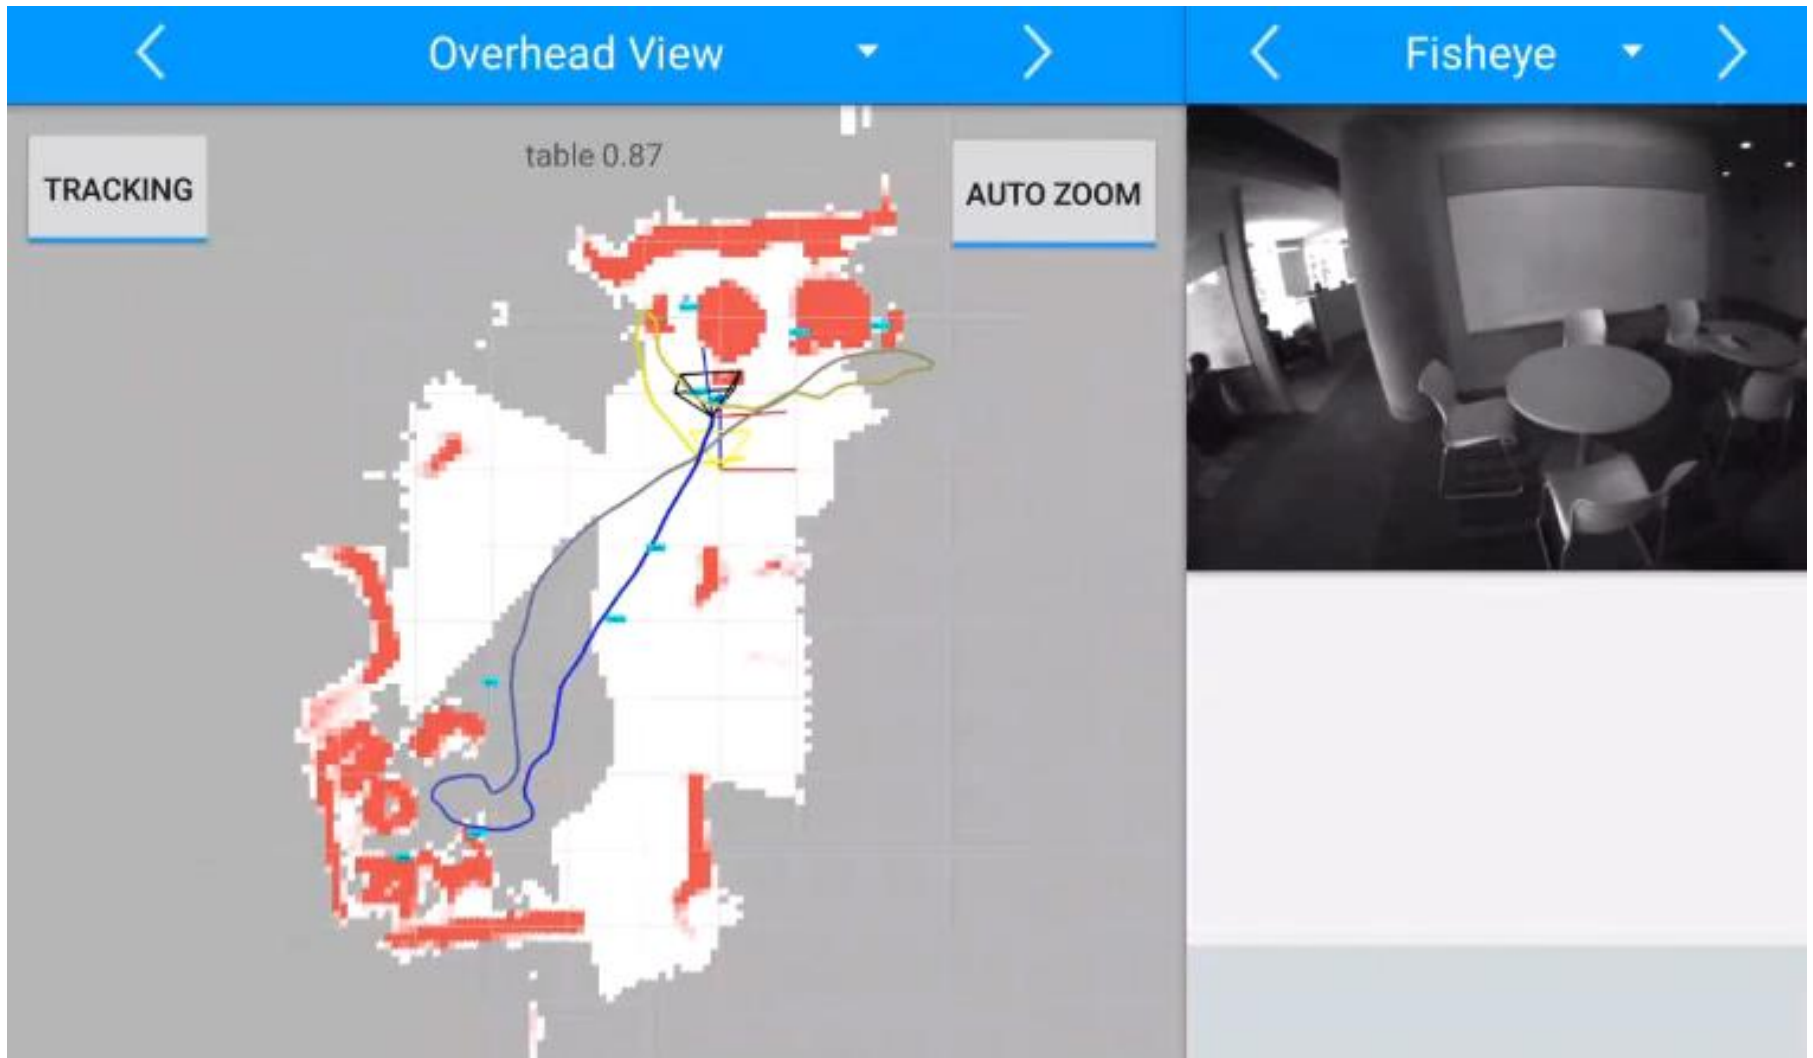

Real-Time

6-DOF Tracking and Scene Understanding with RealSense

Intel RealSense Technology

Model: SR300
(Short-range usages)

Model: R200/LR200
(Longer-range usages)

Model: ZR300
(Longer-range usages + motion sensing)

3D-Sensing Hardware:
“Capture the World in 3D”

3D-Perception Software:
“Understand What You See”

RealSense LR200 Module Architecture

- Active illumination with IR-texture when necessary
- ASIC hardware-acceleration for disparity/depth computation
- Low-power and high-frame-rate operation
- Robust factory-calibrated module with multi-sensor sync

RealSense F200/SR300 Module Architecture

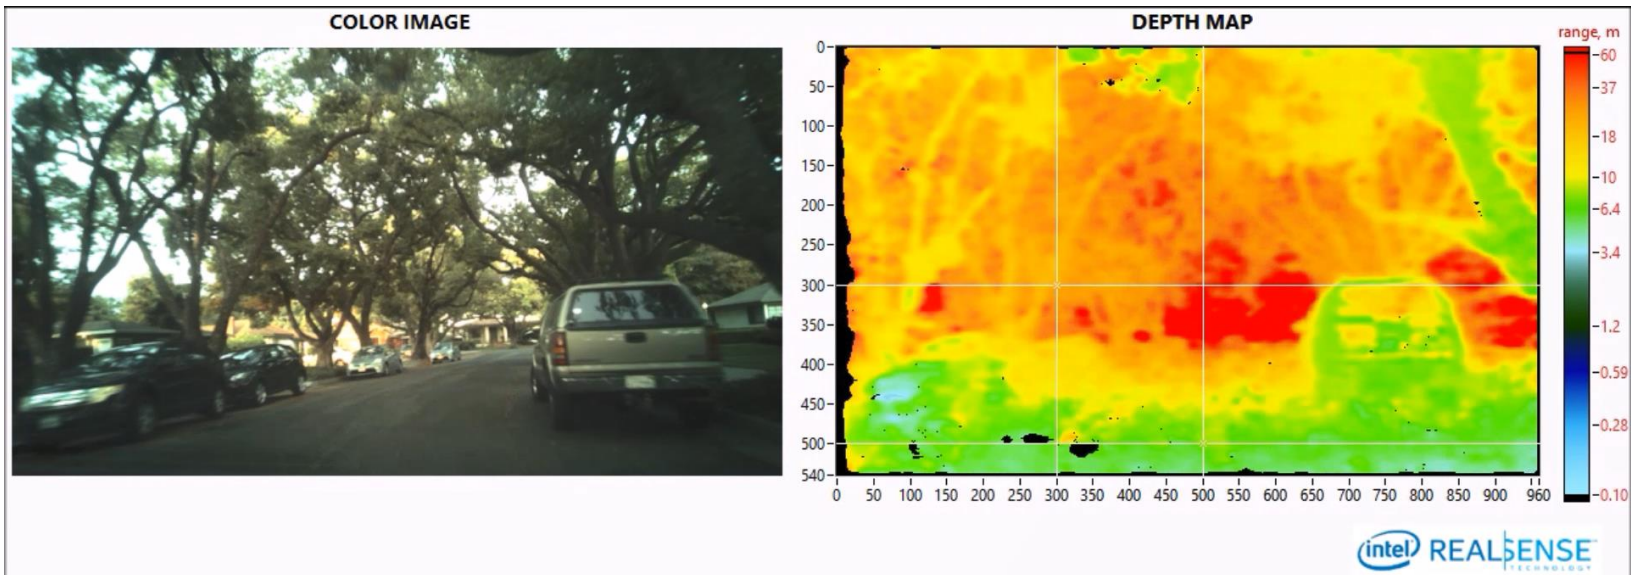

- IR laser + MEMS projector for illumination with binary codes
- ASIC hardware-acceleration for depth computation
- Low-power and high-frame-rate operation
- Robust factory-calibrated module with multi-sensor sync

Next Generation: RealSense 400 Series

- Improved Range and Accuracy
- Indoor and Outdoor Usage
- Lower Power and Smaller Form Factor
- Sampling Q4'16

Next Generation: RealSense 400 Series

Merged Reality Experiences With Intel[®] RealSense™ Technology

Summary

- Project Alloy with RealSense is adding “human-like sensing” to VR, merging the “real” and the “virtual” worlds.
- Join us in developing exciting new interactive and immersive applications!
- For more information on RealSense, please visit:
